Yatharth Goyal

SOFTWARE ENGINEER | JAVA · FULL STACK · BACKEND SYSTEMS

Jaipur, India | yatharthgoyal657@gmail.com
GitHub / LinkedIn / Java DSA / Portfolio

TECHNICAL SKILLS

Languages Java, JavaScript, Python, SQL

Backend Node.js, Express, PostgreSQL, Redis/BullMQ, REST APIs, RBAC

Frontend & Delivery React, Vite, JavaScript, Git, Docker, CI, Playwright

Foundations Data structures and algorithms; 16-topic Java practice roadmap

SELECTED PROJECTS & ENGINEERING CONTRIBUTIONS

AegisED

FULL-STACK · PUBLIC SOURCE

- Built React-driven intake, doctor/bed assignment and discharge flows backed by Express APIs, role checks and audit trails.
- Protected shared doctor and bed allocations with PostgreSQL transactions, row-level locks and rollback handling for competing requests.

EvalForge

PRIVATE · RELEASE PENDING

- Designed durable grading jobs with PostgreSQL persistence, BullMQ workers and idempotent processing; linked rubric scores to exact answer evidence.
- Documented 15/15 backend and 7/7 evaluator local checks; hosted CI and full browser acceptance remain pending.

Grid Flex

LOCAL PROTOTYPE

- Built SciPy/HiGHS energy scheduling with cost, balanced and carbon objectives; independently audited power balance, battery state and deadlines.
- Documented 52/52 local regression tests on synthetic scenarios; AWS SAM templates are prepared, not deployed.

EduPredict AI

PUBLIC SOURCE · DEMO DOCUMENTED

- Built React/Vite student dashboards and assessment workflows backed by FastAPI endpoints and persistent student history.
- Added server-generated assessment IDs and student-scoped intervention updates; database regressions cover isolation and rollback.

EDUCATION & CERTIFICATIONS

JECRC | B.Tech Information Technology

Expected graduation: 2028 | CGPA: 9.00/10.00
